

Schmincke AERO COLOR® Professional – neutral grey improved purity and for optimal erasability

On the suggestion of experienced users, the erasability of the shade has been optimised. The result: the new neutral grey can now be ideally erased to create brightening and shading. It remains at every level of erasing perfectly neutral grey and without any green cast (see illustration above). This has been achieved by adjusting the formula, that means reduction by one pigment; the shade is even purer, more neutral grey and slightly more transparent.

The improved version of neutral grey (28 701) can easily be recognized (starting with batch no 166 108/250 ml and batch no. 166 906/28 ml).

former neutral grey (28 701)
erased with FABER-CASTELL Perfection 7058

Neutralgrau (28 701) with improved formulation
erased with FABER-CASTELL Perfection 7058

The described product characteristics and example applications have been tested at the Schmincke laboratory. The information is based on the technical knowledge and experience which are presently available to us. In view of the diversity of applications with regard to painting techniques, materials and working conditions and the numerous possible influencing factors, the information refers to general areas of application. The information provided here does not constitute a legally binding warranty of specific characteristics or of suitability for a specific application; use of the products is thus to be adapted to the user's special conditions and checked by preliminary tests. We are thus unable to guarantee product characteristics or accept any liability for damage arising in connection with the use of our products.
