

50 068 fixative for pastels

product name:

- Fixative for pastels.

contains:

- Polyvinyl resin, alcohols.

basic information:

- Very effective intermediate and final fixative for pastels and chinks based on a high-quality synthetic resin solved in alcohol.

characteristics:

- Colourless
- very fast drying
- non-yellowing and age-resistant.

handling:

- Shake well before use.
- *Fixative for pastels* is ready to use, but can be diluted with *alcohol / ethanol*.
- Product should be applied with a special fixative diffuser.
- Please clean tools as soon as possible with *alcohol / ethanol*.
- The product is based on alcohol and cannot be mixed with those based on mineral spirit.
- The level of gloss depends in accordance to absorbance of the surface, painting technique and the thickness of the film.
- Sometimes an intermediate fixation of the art work is helpful.
- The subsequent fixing of the surface of a picture produced using materials low in binding agents, especially pastels or chinks, may cause the colour shade to become significantly darker. Using too much fixative frequently causes a loss of "lightness". The product may also makes the support, for example the paper, more transparent.
- The fixative coats normally used in practice give no special UV protection to the paints used! For this reason, we recommend that you use high-quality and lightfast artists' paints from the outset as far as possible.
- Close immediately after use.
- Store in a cool and dry place.
- Individual pre-tests are required (see footer).

product labeling:

- Please refer to the individual safety data sheet on our website www.schmincke.de.
