

50 404 AEROSPRAY B72Product name:

- AEROSPRAY B72.

Contains:

- Synthetic resin, alcohol, dimethyl ether, propane/butane.

Basic information:

- Fixative for several painting and drawing techniques based on Paraloid™ B72, a high quality synthetic resin, well-known from restauration (EMA-Copolymer), which is dissolved in alcohol.

Characteristics:

- Crystal clear, colourless
- Very fast drying, thermoplastic and flexible
- Non-yellowing and age-resistant
- On absorbant surfaces a nearly invisible fixation

Handling:

- Fixative for charcoal and pencil (so they can be painted over with oil colours!)
- Final fixative for charcoal, pencil and pastels
- Also suitable as fixative for watercolour, gouache and aqua linoprint colours
- Can also be used as varnish for inkjet prints, art prints and photos
- Suitable as protection of gold leaf and other metallic foils
- Final varnish for oil and acrylic colours when applied in several layers (semi mat – slightly glossy)
- Shake well before use. Spray at room temperature by moving the can from one side to the other and from top to bottom and holding the can at a distance of 30 – 40 cm from the vertically positioned or slightly inclined and completely dry object. (Make the change in spray direction away from the picture!)
- The level of gloss depends in accordance to absorbance of the surface, painting technique and the thickness of the film.
- Sometimes an intermediate fixation of the art work is helpful.
- The subsequent fixing of the surface of a picture produced using materials low in binding agents may cause the colour shade to become significantly darker. Using too much fixative frequently causes a loss of "lightness". The product may also make the support, for example the paper, more transparent.
- The fixative coats normally used in practice give no special UV protection to the paints used! For this reason, we recommend that you use high-quality and lightfast artists' paints / printing inks from the outset as far as possible.
- Any clogged-up spray heads are best cleaned using acetone.
- Store in a cool and dry place.
- Protect from sunlight and do not expose to temperatures exceeding 50°C (122°F).
- Individual pre-tests are required (see footer).

Product labeling:

- Please refer to the individual safety data sheet on our website www.schmincke.de.
